Create a goods issue in SAP: MIGO_GI

Sometimes conditions come up when stock needs to be removed from inventory. This happens in the sales process when a customer takes ownership. Stock can also be removed from inventory because it has been consumed. To remove stock from inventory in SAP, we create a goods issue.

migo_gi

Now, let's create a goods issue referencing a reservation. We'll use transaction code migo_gi.

Goods Issue	Reservation	163	

With the transaction we've chosen, we have the goods movement set to goods issue and the reference document type set to reservation. We'll now enter the reservation number we want to use. We'll enter 163 and press execute.

Line	Mat. Short Text	W OK	Qty in UnE	EUn	S...	SLoc	Cost Center	Com...	Profit Center	G/L Acco
1	RAW18,PD	☐☐	1,000	PC	⌂		17101602	1710	YB600	2402000

The data from our reservation has now populated in the line item. We have 1,000 pieces of raw material 18.

Quantity	Where	Reservation	Account Assign

Qty in Unit of Entry: 1,000   PC   ⌂
Qty in SKU: 1,000   PC

☑ Item OK   Line: 1 →▪

Now, we'll scroll down. In the Quantity tab, the system has populated the quantity of 1,000 in our quantity to issue field. This is editable if we wanted to issue less than a total reservation quantity. We'll also click the Item OK checkbox. That means the item is okay to be issued.

Now, we'll click the Where tab. Here we'll enter the storage location that we want the reserve stock moved into. We'll enter 171c. Before we post this goods issue, let's look at the current stock in the system.

To do this, we'll type /o to open a new session, and then transaction code mmbe, and press Enter. This brings us to our stock overview report.

In material, we'll enter RM18 at plant 1710 and click execute.

Client/Company Code/Plant/Storage Location/Batch/Special Stock	Unrestricted use	Qual. inspection	Reserved
∨ 🖥 Full	10,000.000		1,000.000
∨ 🖥 1710 Company Code 1710	10,000.000		1,000.000
∨ 🖥 1710 Plant 1 US	10,000.000		1,000.000
🖥 171C Raw Materials	10,000.000		

We see that we have 10,000 in unrestricted stock. We can also see that we have 1,000 in our reserve stock column. We'll go back to our goods issue screen and we'll post this goods issue.

Client/Company Code/Plant/Storage Location/Batch/Special Stock	Unrestricted use	Qual. inspection	Reserved
∨ 🖥 Full	9,000.000		
∨ 🖥 1710 Company Code 1710	9,000.000		
∨ 🖥 1710 Plant 1 US	9,000.000		
🖥 171C Raw Materials	9,000.000		

We now have a success message that shows our material document has been posted. Let's look back to the stock overview for this material. We'll refresh this report. We can see that our total quantity has decreased by 1,000 in the unrestricted use column. Also, we

now have no quantity in our reserve column at plant 1710 after the goods issue has been posted. A goods issue is an effective tool at removing stock from inventory; whether because it's been sold to a customer or because it's been consumed in production.
